

bulls & breds
Annual sale

JANUARY 22, 2024 AT 1PM

DELANEY | ATKINS

Welcome

Welcome to our 14th Annual Sale!

Another year has passed and it is hard to believe it is time for another sale! The lineup this year features the first sons of Land Grant plus sons of Final Print, Lincoln, Benton, Standout, Guardian, Entice and more. This is your first opportunity to buy Land Grant sons and as you inspect them we think you will understand why we are so pleased with the job he has done. We love the muscle, volume, pigment and the consistent quality of his calves. Another feature this year are sons of 8032 who is the dam of Final Print. This elite donor worked on a range of sires and her influence is strong throughout the sale with her offspring and the calves by Final Print. Final Print continues to gain popularity across the breed having sired high selling females at some of the top sales across the country. His combination of calving ease and growth is unmatched in the breed.

Our focus continues to be on breeding sound cattle with performance, muscle and eye appeal and acceptable birth weights. We demand fertility and superior production from our cows with an emphasis on udder quality. We think the bulls and females offered in this sale represent the product we are striving to produce for our customers.

Most of the cattle selling have GE-EPD's (Genomic Enhanced EPD's). GE EPD's provide the latest technology available to genetically test an animal to obtain the highest accuracy possible in their EPD's. We do this to give buyers a higher level of confidence that their bull or heifer will do the job they want. Current EPD's at the time of printing are listed in the catalog and will be updated on all the cattle selling

the week prior to the sale. You will also notice many of the bulls are designated with \$CHB logos.   The \$CHB logo signifies that the bull is in the top 50% of the breed, and the \$CHB Elite logo in the top 25% of the breed for producing feeder cattle that will excel in the economically relevant traits of gain, feed efficiency and carcass merit when mated to Angus cows.

To help you with this early sale date we will keep all the bulls on feed at Delaney Herefords **free of charge until May 1, 2024**. All the bulls will be semen tested and are fully guaranteed.

If you can't make the sale feel free to call one of us or the sale staff for assistance, or you can bid on LiveAuctions.TV the day of the sale. Thank you to all of our customers for your past purchases, friendship and the confidence you have shown in our program. We look forward to working with you in the future!

absentee bidding

If you would like to place a bid but are unable to attend the sale, please direct your bid to any of the owners or sale staff. You may also bid online as the sale will be broadcast live on the Internet.

Watch the sale and bid live at liveauctions.tv

Amanda Eberspacher Hilbrands.....507-828-7089

terms - Terms of the sale are cash or check payable during or after the sale, before cattle will be released. Cattle will not be transferred until paid in full. Each animal will be at the buyer's risk immediately after the animal is sold. Delaney Herefords and/or Atkins Herefords will be retaining a 1/4 semen interest for in-herd use only on all bulls selling unless otherwise noted in footnotes or announced sale day.

guarantee - All bulls will be semen tested and examined to be sound and guaranteed breeders. If an animal fails to breed and is reported to seller by August 1, 2024, it may be returned to seller if in good condition and in compliance with Minnesota health regulations. Once the bull has been returned to the seller and confirmed that he is not a breeder, a replacement bull or credit on next year's sale will be offered.

health - All cattle will be sold in compliance with the health laws of the State of Minnesota. Health papers will be provided. All bulls have been tested and are free from any known genetic defects.

winter - For your convenience, you may winter purchased bulls at Delaney Herefords **FREE OF CHARGE** through May 1, 2024. After May 1, 2024 a yardage charge of \$3.00 per day will apply. We ask females be picked up before February 1, 2024. Females left after that date will incur a \$400 calving charge, plus \$4/day yardage.

insurance - Animals left at Delaney Herefords will be at the buyer's risk immediately following the sale and we strongly recommend purchasing insurance. Contact Art Handel at (605) 391-8233 for your insurance needs.

transfers - Registration certificates will be transferred to the buyer at the seller's expense. Each buyer must be sure to give the clerk the proper name and address for making transfers.

epds - EPDs listed in the catalog are current at time of catalog printing. Updated EPDs will be available sale day. All cattle have been tested for known genetic defects. Under each animal's EPDs, we have listed the animal's percentile ranking in the breed for that trait.

NOTE - All persons who attend the sale do so at their own risk. Owners assume no liability, legal or otherwise, for accidents or loss of property that may occur.

\$CHB EPD in the top 50% of the breed.

\$CHB EPD in the top 25% of the breed.

Sale Info

Bulls

We know that finding a place for a new herd bull in January isn't always easy.

We've got you covered!

Leave your new herd bull(s) here until May 1, 2024.

- FREE OF CHARGE -

Bulls will be kept on a TMR, high roughage ration to develop naturally to be ready for the breeding season.

All bulls will be semen tested and examined by our vet for breeding soundness by April 1st.

We'll have bulls in tip-top shape, ready for your cows come Spring!

Horned or Polled? Heterozygous or Homozygous?

USING A HOMozyGous POLLED BULL
100% of calves will be polled, regardless of cow horn genotype.

It is safe to assume that long term straight bred Angus cows are homozygous polled. With that assumption, it leads to more opportunities to use heterozygous polled and even horned bulls.

USING A HETEROZYGous POLLED BULL
Mated to horned cows: 50% of calves will be horned 50% of calves are polled.

Mated to heterozygous polled cows: 25% of calves will be horned. 75% of calves will be polled.

Mated to homozygous polled cows: 100% of calves will be polled.

USING A HORNED BULL
Mated to horned cows: 100% of calves will be horned

Mated to heterozygous polled cows: 50% of calves will be horned, 50% of calves will be polled.

Mated to Homozygous polled cows: 100% of calves will be polled.

PEN BULL. Homozygous polled.

Check out the spread on this goggle eyed Final Print son. Phenotypically, this guy is a stud, he's big topped, big bodied and big footed all while being below a 1.0 BW EPD. He is in the top 5% of the breed in 7 traits! His dam is a paternal sib to Standout, Benton and Prominent. She is one of our favorite cows and ratios 2@ 92.5 for BW and 2 @ 117 for WW. Look long and hard here. Full brother to lot 2.

Here is a natural calf out of our donor 121G. One of our favorite Land Grants all summer long. This guy is loaded with muscle, he's big topped, stout hipped and massive ribbed. A full sister was a highlight in our pen of 3 heifers that sold in OKC and another full sister sold to Ravine Creek Ranch in our fall female sale. Full brother to lot 13.

Goggle-eyed and out of a terrific BR Trust daughter. Lot 18 is a big ribeye bull that will make mouthwatering daughters. Dam offers a nursing ratio of 3 @ 102.

LOT 11 | JDH MRD 54E 8G BENTON 53K ET

Gone, Never Forgotten

This year, our sale will take place without one of the usual suspects ring side. Our friend and fellow Hereford enthusiast, Scott McGee, left this world without warning a few months ago.

We miss his laughter, quick wit, and that mischievous smile that grew larger over a shared cocktail. We miss our friend.

We are grateful for the time he shared with us and confident his legacy will live on through his family at Valley Creek Ranch.

Cheers to you, Scotty!

Here's a red eyed Lincoln out of 8032 (Final Print's dam). Incredible pedigree here. 8032 sold in our Genetic Opportunity Sale this fall for \$29,000 to Express Ranches and GKB Cattle. Also a full sister to lot 31 sold for \$15000 for half interest to Ollerich Brothers Herefords. Not only is this bull massive ribbed but he blends it so well into an extended attractive front end. Excellent birth to yearling spread with a .31 Marb. Full brother to lot 32 and 33.

Lot 32 is a big framed high performance bull thats in the top 1% for WW and YW. Lot 32 is huge bodied sound structured and fully pigmented with 12 different traits in the top 10% of the breed. Full brother to lots 31 and 33.

Not often do we offer a donor with as much proven production as Mustang or one who's still in the prime of her life. She was a part of one of the best flushes ever at Delaney Herefords. Being a full sister to breed leaders Benton, Standout, and Prominent. Mustang offers as much consistent quality as any animal we've produced. And she has proven to pass those qualities on to her own offspring. Having already produced herd bulls such as Darrow and lots 50 and 51. As well as high end replacement females already in the donor pen. We are able to let her genetics go to work for your operation. You won't want to miss this opportunity to purchase this breed leading female. Dam of lot 50, 51 and 68.

Pasture Exposed to AH Entice J379 ET from 5-15 to 7-1. Vet called safe for a mid March calving date.

Breds

We feel there is no greater investment than a bred female. Many of these heifers are carrying the service of Final Print who is one of the hottest bulls in the breed. Others are bred to proven calving ease sires CRR 056, Munson 15E and our newest sire SHF Kellog K129. All females have been poured with Dectomax and will have received two shots of Scour-Boss before sale day. They were also given their pre-breeding booster shot of BoviShield Gold FP 5VL5 this fall.

We ask these heifers be picked up BEFORE February 1, 2024. Heifers left after that day will incur a \$400 calving charge plus \$4/day yardage fee. If other accommodations need to be made, please contact us.

Outstanding pedigree. A full sister sold out of our pen in OKC last year for \$22,000 and another full sister was last year's high selling female in this sale for \$14,000. Lot 62 is a red eyed, elegant daughter of the great 45C. We think this female can go on and do big things. Maternal sister to lot 61.

Pasture exposed to CRR 88X Ribeye 056 from 4-21 to 7-1. Vet called safe for a March 8th calving date.

Lot 63 is a beautiful Entice out of a 45C daughter. She is red eyed and big outlined with excellent feet and legs. 10 traits in the top 1% of the breed!

Pasture Exposed to SHF KELLOG 589 K129 ET from 4-21 to 7-1. Vet called safe for a February 24th calving date.

Homozygous Polled.

Out of a first calf heifer who has a picture perfect udder, lot 71 is a maternal sister to the lot 45 bull. This moderate framed daughter of Final Print should make a beautiful cow with a great udder. She is high calving Ease and low BW. Here is your chance to have one of the first calves born out of our new herd bull from Knoll Crest who has mind boggling EPDs pigment and is homozygous polled!

Pasture exposed to KCF Bennett King K102 from 5/18/23 to 8/12/23. Vet called safe for a March calf.

Pasture exposed to CRR 88X Ribeye 056 from 4-21 to 7-1. Vet called safe for an April 5th calving date.

bulls & breds
Annual sale
JANUARY 22 @ 1PM

Scan for photos, video, sale details and more!

Commercial

Bred Females

The commercial heifers were pasture exposed to JDH bulls from May 15 to July 10. All females have been poured with Dectomax and will have received two shots of Scour-Boss before sale day. They were also given their pre-breeding booster shot of BoviShield Gold FP 5VL5 this fall.

We ask these heifers be picked up BEFORE February 1, 2024. Heifers left after that day will incur a \$400 calving charge plus \$4/day yardage fee. If other accommodations need to be made, please contact us.

AN EXPLANATION OF EPDS

Calving Ease – Direct (CE) - CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

Birth Weight (BW) - BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW) - WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW) - YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Maternal Milk (MM) - The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Calving Ease (MCE) - MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW) - The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. An example of how the MCW EPD allows breeders to compare sires: If sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

Udder Suspension (US) - Scores range from 9 (very tight) to 1 (very pendulous) and represent assessments of udder support. Weak udder suspension results in pendulous udders that make it difficult for a calf to nurse. Weak suspension in the udder indicates a lack of support in the ligament that ties the udder to the cow's body wall. Over time, weakness in this ligament will allow the udder to hang down too far from the body and may subject the udder to serious problems and increased potential for injury. UDDR EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TS) - Scores range from 9 (very small) to 1 (very large, balloon shaped) and are subjective assessments of the teat length and circumference. Oversized teats are difficult for newborn calves to nurse, and the calf may not receive adequate colostrum. This could lead to a higher incidence of scours or decreased immunity levels in the newborn calf. TEAT EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Scrotal Circumference (SC) - Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm. In the Hereford genetic analysis, a multiple-trait model was used for scrotal circumference. Weaning weight was used as a predictor variable to increase the prediction accuracy of SC EPDs. Therefore, an animal with a weaning weight EPD should also have a SC EPD.

Sustained Cow Fertility (SCF) - The AHA's new Sustained Cow Fertility EPD (SCF) is a prediction of a cow's ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving's to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Dry Matter Intake (DMI) - The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Carcass Weight (CW) - Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT) - The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA) - REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB) - MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMIS) - The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Certified Hereford Beef Index (CHBS) - The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

We're headed to
OKC
&
Denver
in January!

Members of our OKC and NWSS pens will
be offered in our January 22nd sale.
